

Anaphora Resolution and Text Retrieval (Empirische Linguistik / Empirical Linguistics)

The fields of linguistics and information technology can profit from each other in valuable ways if they get connected in a truly interdisciplinary way. This book focuses on anaphora resolution for the English language and shows how rewarding a linguistic-computational perspective can be. It outlines all types of anaphors and their frequencies and also develops rules for resolving non-finite clause anaphors, which have never before been examined.
