

A Birds-Eye View of the Literature of Ethical Science Since the Time of Charles Darwin

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1903. Excerpt: ... A BIRDS-EYE VIEW OF THE LITERATURE OF ETHICAL SCIENCE SINCE THE TIME OF CHARLES DARWIN. Walter L. Sheldon. In presenting this paper I am assuming that it is being offered to a body of men for the most part absorbed in a study of the physical sciences. Owing to the necessity nowadays for specializing, and to the effort required to keep up even with the literature in your own departments, it may be that some of you are not fully aware of what has been going on along those lines where the work is of a more subjective character. It struck me therefore that I might be doing a real service by giving you a hint as to the trend of the literature in the science of ethics for the last three or four decades, since the time of Darwin. It would be a satisfaction on my part to convince you that in this other direction good work has been going on, of as painstaking and thorough a character as anything which may have been done in physics, chemistry or biology. My purpose is not myself to criticise or theorize, but merely to sketch for you a birds-eye view of the situation. Men of as great intellectual caliber as any of those at work in your special departments, have been grappling with the problems of ethical science; and they have achieved encouraging results, while these results may not be as great as some would have anticipated. Although ethics has a large subjective element in it, most of the leading workers in this direction would regard it strictly as a science, and deal with it in that light. These men are undertaking to investigate a body of facts, to analyze them, to correlate them, to interpret them, and reduce them if possible to a system. Some of them would, however, regard
