

American gems and precious stones

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1883 Excerpt: ...of Mill pond, loose in the soil; at Grantham; at Cabot, in Vermont; at Chesterfield, Massachusetts; at Bolton, Litch field, Stafford, Tolland, and Vernon, Connecticut; on the Wissahickon, 8 miles from Philadelphia, in abundant reddish brown crystals; and at Canton, Georgia, at the lead mine. It is also found at the Parker mine, Cherokee county, North Carolina, in fine twins; also on Persimmon, Hanging Dog, and Bear creeks, Madison county, and Tusquitee creek, Clay county. At the latter localities it is found in argillaceous and talcose slates. Some staurolite macles similar to a chiastolite are described by Dr. C. T. Jackson from Chailestown, New Hampshire, which by insensible shades pass into andalusite macles. Iolite.--The late Dr. Torrey possessed a fine seal made of a cube of iolite from the albite granite of Haddam, Connecticut, that displayed its dichroitic properties to the greatest perfection, the blue being remarkably fine. Though this locality promised well, the supply of gem material was scant. It has been found near the Norwich and Worcester railroad, between the Shetucket and Quinnebaug, where the gneiss has been quarried for the road. At Brimfield, Massachusetts, on the road leading to Warren, it occurs with andalusite in gneiss, and also near Norwich, Connecticut. It is found also at Bichmond, New Hampshire, with anthophyllite in a talcose rock. No gems are being found at present. Tourmaline.--One of the remarkable tourmaline localities (b) of the world is Mount Apatite, on the Hatch farm, Auburn, Androscoggin county, Maine, the locality first discovered by Mr. S. R. Carter. It was worked by Mr. N. H. Perry, who first found

the true vein in 1882, and obtained probably one thousand five hundred crystals. They are a *American Journal of Science*, Vo...
